Table 11.1 How does your library use Amazon?

1. For purchases.
2. Sometimes a student forgets the title of the book they need, but they have an ISBN or a couple words from the title, or remember the author, and they remember the cover of the book. Amazon's cover browsing is easier than WorldCat.org's, though I do go to WordCat as well.
3. Ordering library materials, finding books, cover images are incorporated into our online catalog.
4. We use the book covers and reviews for the Iowa Children Choice Award books.
5. Order the few new books that we need to acquire very quickly (rush).
6. Collection development (like search inside - give a good idea if material useful for CC students); use synopsis for our research guides.
7. Reference verification of title/spelling of author's name. Some purchasing. Not really leveraging it.
8. Order books.
9. I created a Shelfari widget to showcase new acquisitions on our library page.
10. Locate titles, verify title information, look at reviews, get titles that there are semi-urgent requests for so we don't have to wait for a regular jobber.
11. Only for buying books. Mostly printed.
12. Purchase of books.
13. To research books for collection development.
14. Verifying titles at the patron's request. Using reviews. Finding out-of-print used books, getting price information, seeing similar titles, ordering hard to get titles. Friends of the Library sell books on Amazon.
15. Purchase most of our books and DVD's from them.
16. For book reviews and book covers for the library OPAC.
17. Primarily print book purchases.
18. To verify publication information and use the pictures or descriptions of items.
19. Can't use it due to county purchasing laws.
20. As a replacement for Books In Print, and a few purchases that are unavailable through our distributor.
21. To review books and when ordering materials.
22. For ordering and sometimes for images to books in LibGuides and for verifying citation info or helping students find copies of books they want to purchase.
23. Opac reviews/images.
24. Browse within a book for reference questions best answered by texts. Provide clients with suggested books they could purchase or borrow from a university/public library.
25. We use it as a research tool for collection building, answering reference questions, and as a vendor for various supplies.
26. ISBN searches.
27. Use book covers in LibGuides, buy out of print titles.
28. To buy books and movies.
29. To verify bibliographic details for acquisitions work, kind of like we used to use

Books in Print. We're small and don't have the money to subscribe to BiP, so Amazon fills that need quite well. For free.

30. Purchase of books and materials, comparison pricing, looking for publication histories, checking reviews.
31. We buy print books. Use it to verify orders, existence of titles. Comparative shop.
32. Mostly acquisitions of non-legal materials.
33. Purchasing and selling.
34. To purchase books only.
35. Images for catalog, title searcher for collection development.
36. To order books. To show students how to check for books and read the description of the book.
37. Very sparingly. Basically I just buy books on occasion.
38. Book purchases, subject information.
39. Verification of citations. Occasional purchase of print titles.
